

# Hot Enough For You?

Protecting yourself during summer heat.

## Dress Right

- Wear loose-fitting, lightweight, light colored clothing to reflect heat and sunlight.
- Protect your face and head with a wide-brimmed hat.

## Keep Heat Outside & Cool Air Inside

- Put up temporary reflectors in windows, like cardboard covered with aluminum foil.
- Hang shades, sheets or curtains on windows that get morning or afternoon sun.

**Drink Lots of Water** even if you don't feel thirsty. Your body needs water to keep cool. Don't drink alcohol or caffeine. They make the heat's effects worse.

**Don't Use Salt Tablets** unless told to do so by a doctor. Salt causes the body to retain fluid, resulting in swelling.

**Eat small meals & eat more often.** Large, heavy meals cause your body to increase internal heat to digest food.

**If your home doesn't have air conditioning,** pick other places you can go during the warmest part of the day. Schools, libraries, malls, rec centers, and other public buildings may offer air-conditioning on the hottest days. Your community may have cooling stations available during heat alerts.

Call 2-1-1 Helpline 24 hours a day for more information.

# Heat Danger Signals

## Heat Stroke

### What to look for

- Hot, red skin.
- Rapid, weak pulse.
- Rapid, shallow breathing.
- Body temperature as high as 105 degrees.
- Changes in consciousness.

### What to do

- Call 911. Heat stroke may be deadly.
- Move victim to a cooler place.
- Quickly cool the victim. Put in a cool bath or wrap wet sheets or towels.
- Keep the victim lying down.
- Give sips of water if victim is fully awake and not vomiting.

## Heat Exhaustion

### What to look for

- Cool, moist, pale or flushed skin.
- Heavy sweating.
- Headache.
- Nausea or vomiting.
- Dizziness & exhaustion.
- Body temperature may be normal or may be rising.

### What to do

- Move victim to a cooler place.
- Remove or loosen tight clothing.
- Apply cool, wet cloths.
- If conscious, give sips of cool water every 15 minutes.
- Avoid drinks with caffeine or alcohol.
- Call your doctor or 911.

## Heat Cramps

### What to look for

- Tightening of the muscles in the legs or other parts of the body.

### What to do

- Move victim to a cooler place.
- Lightly stretch the affected muscle.
- Give a half glass of cool water every 15 minutes.
